Firewall i.Q.
a module overview

Demand unparalleled Security...

Entrust

Entrust...

Firewall iQ's "Packet Filter Firewall" allows for further protection not found in other firewall applications today.

Opteq's Firewall iQ provides a high performance, feature rich solution to firewall styled security.

Firewall iQ is the core of the Opteq iQ solution's security capabilities. Many years of development and an extensive client base have resulted in one of the highest throughput, lowest latency and feature-rich firewall products available today.

Firewall iQ, when deployed together with the other Opteq iQ security focused modules, provides unparalleled broad based answers to network security and protection addressing every segment of network risk known to date.

Firewall iQ uses the same packet classification methodology as other Opteq modules. Packets are classified and managed once for all deployed modules.

Stretch your network to deliver real Business Benefits.

Enhancing your network, building your business, Firewall iQ:

- Gives you peace of mind, with regards your network, with its complete firewall styled security.
- Provides exceptional flexibility and scalability with no user based network licensing.
- Provides for the identification, tracking and logging of any packet providing you with greater visibility into the security of your network.

Firewall iQ can be deployed at any point on the network together with any other Opteq iQ network management module – on the same platform.

Get the Technology Edge...

Providing a dynamic solution to managing network security, Firewall iQ:

- Provides Stealth Forwarding, Masquerading, Ghosting, Denial-of-Service protection, anti- Hijacking, anti- Spoofing or any other of the known security risks or protection techniques.
- Offers robust redundancy and rule replication for high availability.
- Provides stateful management of UDP, ICMP and TCP sessions.
- Reassembles fragments in order to ensure your security.
- Has an industry leading network address translation (NAT) engine with full port mapping support (NPAT) and a redirection engine that supports unlimited servers with load balancing and dead host detection.
- Manages every aspect of protection with an unlimited on and off line rule set management, logging and log viewing, management through views and filters with user defined "named network objects" and comprehensive reporting.

Expand your expertise... Experience Excellence.

Protecting and managing every segment of risk from untrusted networks that may threaten your organisation, Firewall iQ provides you with the peace of mind that your network remains secure. Powerful and feature-rich as a stand alone module, Firewall iQ, once integrated with our additional modules, will provide you with a holistic network management solution that delivers security without ambiguity, performance without compromise, management without difficulty, scalability and usability without complexity.
